

FlightStats Data and Platform

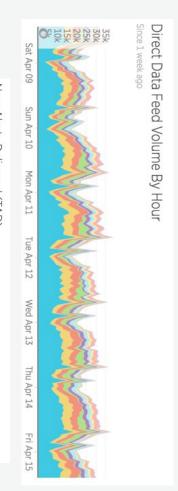

Who is FlightStats?

FlightStats is the leading provider of global real-time flight status data.

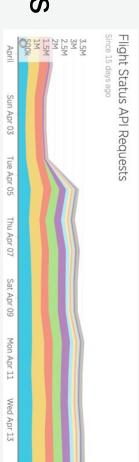

Scope and Scale

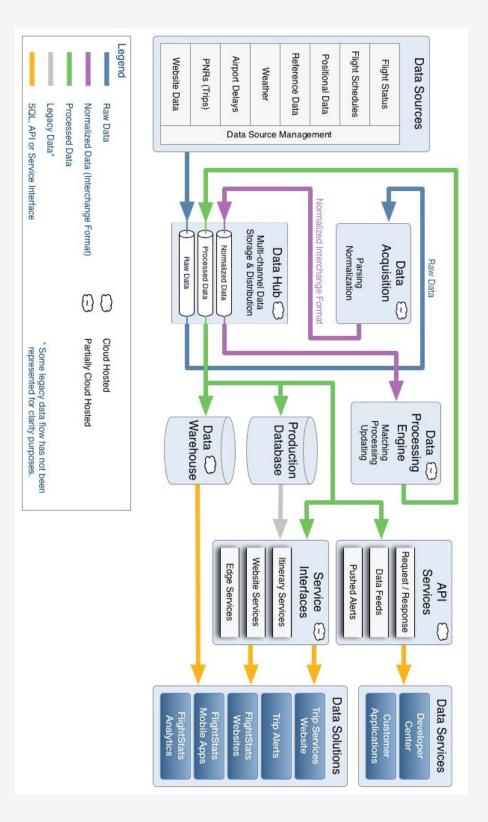

- Over 500 sources of data
- Daily ingress
- ~15M flight events
- ~260M aircraft positions
- ~1M PNRs
- Daily egress
- ~2M FlightStats.com requests
- ~1M mobile app requests
- ~15M Flex API requests
- ~1.5M flight/trip notifications

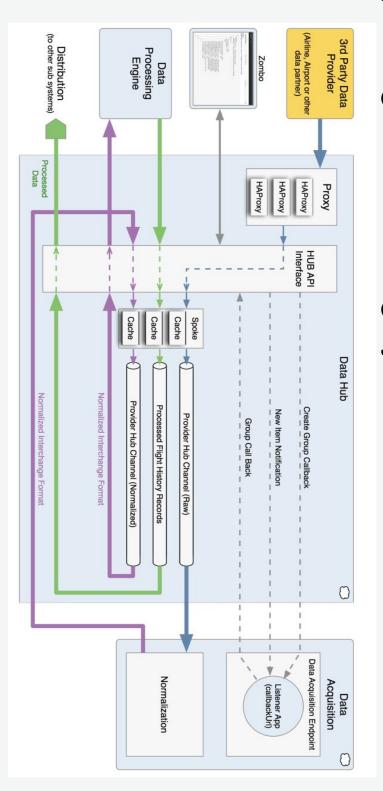

Data Pipeline

The Hub

Object storage based, scalable, highly available, multi-channel data queuing and eventing system.

Flight Notifications

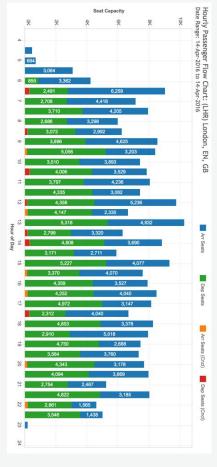

Data Warehouse

- Data warehouse with 6 Years of historical flight data
- Analytics Products
- Airline competitive analysis
- Airline route analysis
- Airport operations analysis
- On time performance metrics

Hybrid Cloud

- Amazon Web Services (AWS) Resources hosted in our private data center and with
- Core data processing and service layer resides in the private data center
- API endpoints that require low latency connections live in AWS
- Private infrastructure virtualized with VMWare

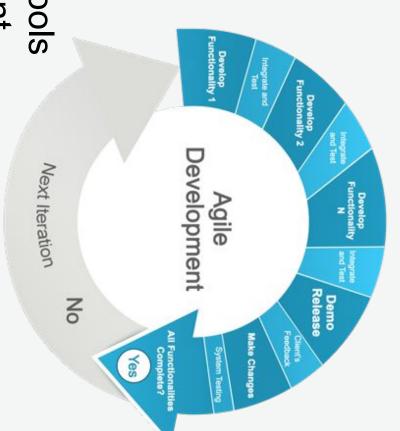

Engineering Principles

- Agile development
- Small, fast teams
- Product centric
- Customer interactive
- Semi-autonomous
- Automate everything
- Measure everything
- Total system awareness
- Industry best practices and tools
- Recruit and hire the best talent

Software Stack

- Java 8 backend
- Node.js micro-service edge layer
- PostgreSQL, MongoDB databases
- Web HTML5, React, Redux, Elasticsearch
- Mobile iOS/Android
